

(XDR-960-xx)

(XDR-960-xxLA)

(XDR-960-xxPI)

■ Features

- 85~305Vac input with PFC (277Vac available)
- Global certificates in multi-fields(ITE 62368-1,Industrial 61558-1/-2-16,61010) & Marine DNV,SEMI47,CID2 HazLoc approved
- 96mm ultra slim width
- High efficiency up to 96% and no load power dissipation 1.5W by R.C.
- Built-in MODBus RTU protocol
- 200% peak power capability
- 600% transient peak current capability
- Built-in constant current limiting circuit
- Current sharing up to 3840W (3+1) for parallel use
- Protections: Short circuit / Overload / Over voltage / Over temperature
- Fanless design, cooling by free air convection
- Over voltage category III (OVC III)
- -40~+85°C wide range operation temperature(>+60°C derating)
- Operating altitude up to 5000 meters
- Built-in remote ON/OFF control and DC OK relay contact
- Ultra low inrush current <10~23A
- Built-in ORing FET
- Tool free terminal block (LA Type)
- Conformal coating
- Can be installed on DIN rail TS-35/75 or15
- 5 years warranty

■ Description

The XDR-960 series is a 960W AC/DC high-end ultra slim industrial DIN rail power. Key features of this series include a narrow 96mm casing, optimizing system installation space, and an ultra-wide input range of 85~305Vac suitable for global use. It boasts a maximum efficiency of 96% and a low standby power consumption 1.5W for energy savings and carbon reduction. It supports MODBus communication interface, provides constant current with up to 200% peak power, and can handle transient peak current of 600%. It has a fanless design, ultra-wide operating temperature range of -40 to +85°C (up to +60°C at full load); OVCIll compliance; parallel function capability up to 3840W; ultra-low inrush current of <10~23A, and includes DC OK and remote ON/OFF functions. It also has a built-in ORing FET, the internal PCB has a coating for basic moisture and dust protection, and it has multiple terminal blocks for selection. With comprehensive protection functions, complete safety certifications, and a 5-years warranty, the XDR-960 series is a compact, high-performance, and highly reliable DIN rail power supply.

MTBF	819.6K hrs min. Telcordia SR-332 (Bellcore); 113.3K hrs min. MIL-HDBK-217F (25℃)			
DIMENSION	96*125.2*132mm (W*H*D)			
PACKING	2.06Kg; 6pcs/ 13.4Kg / 1.47CUFT			
NOTE				
1. All parameters NOT specially mentioned are measured at 230Vac input, rated load and 25℃ of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1 μ F & 47 μ F parallel capacitor. 3. Tolerance : includes set up tolerance, line regulation and load regulation. 4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives. (as available on https://www.meanwell.com/Upload/PDF/EMI_statement_en.pdf) 5. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft). 6. Installation clearances : 40mm on top, 20mm on the bottom, 5mm on the left and right side are recommended when loaded permanently with full power. In case the adjacent device is a heat source, 15mm clearance is recommended. ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx				

Block Diagram

Derating Curve

Suitable for 100/110/115/120Vac System
(85~135Vac)

Suitable for 220/230/240/277Vac System
(180~305Vac)

Output derating VS input voltage

■ Peak Power

$$P_{av} = \frac{P_{pk} \times t + P_{npk} \times (T-t)}{T} \leq P_{rated}$$

$$\text{Duty} = \frac{t}{T} \times 100\% \leq 35\%$$

$$t \leq 5 \text{ sec}$$

P_{av} : Average output power (W)

P_{pk} : Peak output power (W)

P_{npk} : Non-peak output power(W)

P_{rated} : Rated output power(W)

t : Peak power width(sec)

T : Period(sec)

For example (24V model) :

$V_{in} = 200\text{Vac}$ $\text{Duty_max} = 5\%$

$P_{av} = P_{rated} = 960\text{W}$

$P_{pk} = 1920\text{W}$

$t \leq 5 \text{ sec}$

$$T \geq \frac{5 \text{ sec}}{5\%} \geq 100\text{sec}$$

$$P_{npk} \leq \frac{T P_{av} - t P_{pk}}{T-t}$$

$$P_{npk} \leq 909.5\text{W}$$

■ Transient peak current Capability

※ The power supply can provide transient peak current to support the start-up of inductive or capacitive loads.
The maximum duration and voltage dips are explained below.

Transient peak current voltage dip

Load	100~132Vac Vo(%)	180~305Vac Vo(%)	Time (Max.)
3xIo	50	66	100ms
4xIo	37	50	70ms
5xIo	30	40	40ms
6xIo	10	10	15ms

※ After a transient peak current event occurs, the power supply must remain within its rated output for at least 5 seconds before the next event.
If three transient peak current events occur consecutively, the power supply will limit the output current to 100% for at least 15 seconds.

For example : (600% transient peak current)

■ Function Manual

Pin No.	Function	Description
1,2	DC OK Relay Contact	Contact close : PSU turns ON/DC_OK ; Contact open : PSU turns OFF/DC_fail; Contact ratings (max.): 30Vdc/1A ,30Vac/0.5A resistive load.
3	GND	Current sharing signal. When units are connected in parallel, the GND pins of the units should be connected mutually to allow current balance between units.
4	CS	Current sharing signal. When units are connected in parallel, the CS pins of the units should be connected mutually to allow current balance between units.
5	TC	Transient peak current Capability. the TC pin of the units should be connected GND
6	D-	Data line used in MODBUS interface
8	D+	
7	GND_AUX	The signal return is isolated from the output terminal. (+Vo & -Vo)
9	RC	The unit can turn the output ON/OFF by electrical signal or dry contact between RC ON/OFF(Pin9) and 5V_AUX(Pin10). Power ON: Short(4~5Vdc);Power OFF: Open(<0.5Vdc);The Maximum input voltage is 5Vdc.
10	5V_AUX	For remote control signal only. Isolated from the output terminals.

1.Parallel Use

XDR-960 has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below :

- (1) The transient peak current capability needs to be disabled, The TC pin of the units cannot be connected to GND .
- (2) Parallel operation is available by connecting the units shown as below (CS, GND are connected mutually in parallel).
- (3) Difference of output voltages among parallel units should be less than 0.2V.
- (4) The total output current must not exceed the value determined by the following equation (Output current at parallel operation)

$$= (\text{The rated current per unit}) \times (\text{Number of unit}) \times 0.9.$$
- (5) In parallel operation 4 units is the maximum, please consult the manufacture for other applications.
- (6) The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
- (7) When in parallel operation, the minimum output load should be greater than 5% of total output load.
 (Min. load > 5% rated current per unit x number of unit)
- (8) In parallel connection, maybe only one unit (master) operate if the total output load is less than 5% of rated load condition.
 The other PSUs (slaves) may go into standby mode and their output Green LEDs & relays will not turn on.
- (9) CS and GND lines should be twisted in pairs.

2. DC OK Relay Contact

Contact Close	PSU turns ON / DC OK.
Contact Open	PSU turns OFF / DC Fail.
Contact Ratings (max.)	30Vdc/1A, 30Vac/0.5A resistive load.

External voltage source (U) and resistor (R)
(The max. Sink is 30Vdc/1A, 30Vac/0.5A)

3. Support MODBus Communication

Communication provides functions such as control, setting, and monitoring.
Parameters include output voltage, output power, input voltage, etc
For details, Please refer to: <http://www.meanwell.com/manual.html>

Communication cable

Personal Computer

4.Remote ON/OFF Control

The PSU can be turned ON/OFF by using the "Remote Control" function.

PSU Vo Status	Between RC(Pin9) and 5V_AUX(Pin10)
Remote power ON	Short or keep 4~5Vdc
Remote power OFF	Open or keep<0.5Vdc

			
R.C. by external switch.	R.C. by user's optocoupler control module.	R.C. by user's external auxiliary power.	R.C. by user's Relay control module.

5. Protection Against Inverse Voltages From The Load

Prevent PSU damage from Back Electro magnetic Force during deceleration of motor or inductive load.

PSU'S ORing FET turn OFF voltage	
MODEL	Max. allowable reverse voltage
XDR-960-24	<35V
XDR-960-36	<50V
XDR-960-48	<63V

6. LED Status Indictors

Description	Output of alarm
Restore Factory Settings	Green : 3 Blink/Pause  
DC OK	Green 
DC Fail	Red 
Overload (115Vac: >150% rated current) (230Vac: >200% rated current)	Red : 1 Blink/Pause  
Over voltage	Red : 2 Blink/Pause  
Over temperature	Red : 3 Blink/Pause  
Against Inverse Voltages From The Load	Red : 4 Blink/Pause  
High Ambient Temperature Warning	Red : Blink  
Others (Note)	Red : 5 Blink/Pause  

Note: Others include protection status AC UVP、Internal Communication error and EEPROM error.

■ Accessory List

Communication interface mating wire (standard accessory)

No.	Item		Quantity
1	Mating wire	 H20J1-10 or equivalent UL1007 28AWG	1pcs/per model

■ Accessory List and Installation Diagram for GL Type

- The GL Type model is recommended for GNV certification or high vibration application.
- The GL Type model include the following accessories.

NO.	Item		Quantity
1	GL installation bracket		2
2	Screw(M3*8)		4
3	Screw(M4*8)		4

※ GL Type mechanical specification

※ GL Type installation steps

Step1	Step2	Step3
		
Detach the DIN Rail clip by removing screws.	Mount the steel brackets to the back of the case with M3*8 (L=8mm) screws. Recommended screw torque setting is 5 Lb-In.	Mount the XDR-960 power supply directly to the wall/panel through the mounting holes on the brackets.

■ Installation Instruction

This series fits DIN rail TS35/7.5 or TS35/15.
For installation details, please refer to the Instruction manual.

ADMISSIBLE DIN-RAIL: TS35/7.5 OR TS35/15
(For reference only. Not included with unit.)

■ Installation Manual
